PEGWIN CIRCLE

BUSINESS REQUIREMENTS DOCUMENT (BRD)

Project Name: Pegwin Circle

Document: Business Requirements Document

Version: 1.0

Status: Final Draft

Prepared By: Project Team

Date: 29 August 2026

Intended Audience: Client, Project Team, Development, QA and Project Stakeholders

---

1. EXECUTIVE SUMMARY

Pegwin Circle is a mobile-first social event and community platform that enables users to discover and attend events, purchase tickets, join communities, and participate in community groups.

Hosts can create and manage events, configure ticketing, manage communities, monitor attendees, and receive payouts. Super Admins control platform-level event approval, moderation, host management, and policy enforcement.

The MVP will launch in India using INR (₹).

---

2. BUSINESS OBJECTIVES

- Provide a simple platform for discovering and booking local events.
- Enable hosts to create, manage and monetize events.
- Provide communities for event-related communication and engagement.
- Provide secure ticketing, payment and QR-based entry validation.
- Provide platform-level moderation and event approval.
- Support approximately 100,000 registered users, 10,000 monthly active users and 100,000 ticket transactions per month, with the ability to scale further.

---

3. PROJECT SCOPE

3.1 In Scope

- Mobile application for users and hosts.
- User registration, login and OTP authentication.
- Event discovery, search, filtering and location-based discovery.
- Event creation and Super Admin approval.
- Ticket tiers, pricing, coupons and checkout.
- Cashfree and Razorpay payment integration.
- Host payouts(Manual).
- Digital tickets and QR validation.
- Offline QR validation and synchronization.
- Communities and text-based group chat.
- Community administration and moderation.
- Notifications.
- User account and privacy management.
- Super Admin platform controls.
- Desktop/Web-based Host Portal(Basic).
- Map Based Proximity Search.
- Aadhar Card and PAN Verification

3.2 Out of Scope

- Direct user-to-user private messaging.
- Ticket transfer.
- Pegwin Wallet in the current version.

---

4. USER ROLES

Role	Description
User/Attendee	Discovers events, purchases tickets and joins communities.
Host Admin	Creates and manages events and communities and manages attendees.

Community Admin	Manages community members, groups and content where authorized.
Super Admin	Controls platform operations, event approvals, moderation and host enforcement.
Event Team Member	A user assigned by the Host Admin to assist with a specific event. Access is limited to the permissions assigned for that event, such as event management or ticket scanning.

---

5. FUNCTIONAL REQUIREMENTS

5.1 Authentication & Account Management

- Users shall register and authenticate using email or phone number with OTP verification.
- Users shall be able to log in, log out and recover account access.
- Users shall be able to manage their profile and account settings.
- Users shall be able to request account deletion.
- Deleted personal information shall be deleted or anonymized where applicable, while legally required transaction records may be retained.

5.2 Event Discovery

- Users shall be able to browse and search available events.
- Users shall be able to filter events by applicable categories, interests and location.
- The application shall provide event details including date, time, location, description, highlights, guests, amenities, FAQs and applicable policies.
- Users shall be able to save/bookmark relevant events.

5.3 Event Creation & Approval

- Host Admins shall be able to create events, edit events and save events as drafts.
- Hosts shall submit events for Super Admin review.
- Super Admin shall have final authority to approve or reject events.

- Approved events shall progress through Published → On Sale → Live.
- Super Admin may reject, suspend or remove events violating platform policies.
- If a host cancels 3 or more events, the account shall be flagged for review.
- Pegwin may warn, suspend or permanently remove hosts for serious or repeated violations.
- **Event Team:** Host should be able to add team members to a specific event with different permissions, like managing the event or scanning tickets. Multiple team members should be able to scan tickets at the same time, and once a ticket is scanned, it should show as checked-in and cannot be scanned again.

5.4 Ticketing & Checkout

- Hosts shall be able to create multiple ticket tiers with prices and capacity limits.
- Users shall be able to select tickets and provide required attendee information.
- Coupons/discounts shall be applicable where permitted.
- Ticket availability shall be updated based on successful transactions. **Once the customer initiates ticket booking, the ticket will be temporarily locked for 10 minutes. The ticket will be released if the transaction is not completed successfully within this period.**
- Tickets shall be non-transferable.
- Users shall receive digital tickets containing event and QR information.

5.5 Pricing, Fees & Payments

The approved pricing model is:

Host Ticket Price → 10% Pegwin Platform Fee → Customer Display Price → Discount/Coupon → 18% GST → Final Payable Amount

Example:

Host Price: ₹500

Pegwin Fee: 10% = ₹50

Customer Display Price: ₹550

Discount: ₹100

Taxable Amount: ₹450

GST: 18% = ₹81

Final Payable Amount: ₹531

The platform fee shall be included in the customer-facing ticket price and shall not be displayed as a separate additional fee.

Who will be responsible for bearing the coupon discount — Pegwin or the Host?

Payment processing shall support Cashfree and Razorpay.

Traffic Distribution:

50% Razorpay and 50% Cashfree

The final routing approach may evolve without changing the customer-facing pricing model.

5.6 Ticket Validation

- Hosts/staff shall be able to scan ticket QR codes.
- Required ticket data may be downloaded before the event for offline validation.
- Offline scan results shall synchronize with the server when connectivity is restored. **When multiple hosts or staff members scan the same ticket QR code while their devices are offline, the same ticket may be accepted on multiple devices before synchronization, potentially resulting in duplicate check-ins.**
- A successfully checked-in ticket shall not be accepted again.
- Synchronization shall prevent duplicate check-ins across multiple devices where possible.

5.7 Communities & Group Chat

- Users shall be able to join permitted communities and groups.
- Host/Admins shall be able to manage communities, groups and members.
- Host/Admins shall be able to publish announcements, event updates, offers and other community updates.
- Host/Admins shall be able to send text messages, images, videos, files and other permitted media within community groups.

- Members shall be able to send text messages only. Members shall not send images, videos, files or other media.
- Host/Admins shall be able to remove members and inappropriate messages.
- Community content shall be subject to moderation controls.
- Users shall not have direct private messaging with other users.

When joining a group, users shall receive a warning:

“Please do not use abusive, offensive, or inappropriate language. Respect all community members.”

5.8 Notifications

Important notifications may be delivered through:

- In-app/Push notifications
- Email
- SMS/Phone

Notifications shall include applicable ticket purchases, event changes, cancellations, refunds and community announcements.

5.9 Event Cancellation & Rescheduling

- Hosts shall be able to cancel or reschedule events subject to applicable permissions.
- Cancelled events shall trigger notifications to eligible ticket holders.
- Eligible refunds shall be processed according to the applicable refund policy.
- Rescheduled events shall notify affected ticket holders of the new date/time and applicable refund options.

---

6. NON-FUNCTIONAL REQUIREMENTS

6.1 Performance

- The application should provide responsive user interactions.
- Event discovery and map functionality should provide timely results.
- Group messages should be delivered in near real-time.

Exact performance targets are **TBD** unless otherwise agreed.

6.2 Scalability

The MVP shall be designed to support approximately:

- 100,000 registered users
- 10,000 monthly active users
- 100,000 ticket transactions per month

The system should be capable of scaling beyond these volumes.

6.3 Security

- Authentication and authorization shall be securely implemented.
- Role-based access control shall restrict access according to user permissions.
- Payment information shall be handled through secure payment integrations.
- Sensitive personal information shall be protected.
- Secure communication shall be used for application and API traffic.
- Location privacy shall be maintained; exact user locations shall not be displayed.

6.4 Reliability

- Offline QR validation shall continue during temporary network outages.
- Offline validation records shall synchronize after connectivity is restored.
- Payment and important transaction operations should support appropriate failure handling and retry mechanisms.

6.5 Availability & Recovery

The application should be designed for reliable service availability and recovery from infrastructure or third-party service failures.

Exact availability and recovery targets are **TBD**.

6.6 Usability

- The application shall follow the approved Figma design.
- Core user journeys should require minimal unnecessary steps.
- Error, loading, empty and confirmation states should provide clear user feedback.

6.7 Compatibility

The MVP shall support the agreed mobile platforms:

- iOS

- Android

Supported OS versions are **TBD**.

6.8 Accessibility

The application should provide accessible controls, readable content, clear labels and appropriate error feedback.

Detailed accessibility standards are **TBD**.

---

7. BUSINESS RULES

BR-001: Super Admin has final approval authority for events.

BR-002: Host Admin cannot approve their own event.

BR-003: Events follow the lifecycle: Draft → Review → Published → On Sale → Live → Completed.

BR-004: Events may also be Cancelled or Rescheduled.

BR-005: If a host cancels 3 or more events, the account is flagged for review.

BR-006: Pegwin may warn, suspend or remove hosts for fraud, fake events, misuse, payment issues or policy violations.

BR-007: Tickets are non-transferable.

BR-008: Platform fees are included in the displayed ticket price.

BR-009: GST is applied after discounts according to the approved pricing model.

BR-010: Host payouts are made approximately 5–7 days after event completion.

BR-011: A successfully checked-in ticket cannot be checked in again.

BR-012: Direct user-to-user messaging is not supported.

BR-013: Community members can send text messages only.

BR-014: Host/Admins may send permitted text and media content, including images, videos and files, within community groups.

BR-015: Exact user location shall never be displayed.

BR-016: Event Team Members shall only have access to the event-level permissions assigned to them by the Host Admin.

BR-017: A ticket successfully checked in by any authorized device shall not be accepted again, including when multiple team members are scanning tickets

concurrently.

---

8. STATUS LIFECYCLES

Event

Draft → Review → Published → On Sale → Live → Completed

Additional states:

Cancelled / Rescheduled

Ticket

Payment Pending → Confirmed → QR Generated → Checked-in → Completed

Additional states:

Cancelled / Refunded / Expired

---

9. DATA REQUIREMENTS

Major business entities include:

- User
- Host
- Event
- Venue/Location
- Ticket
- Ticket Tier
- Order
- Payment
- Coupon/Discount
- Payout
- Community
- Community Group
- Group Member
- Group Message
- Notification
- QR/Check-in Record
- Moderation Record
- Report/Violation Record

- Event Team Member / Event Staff Assignment

Sensitive information shall include applicable personal, payment, account and location-related data.

---

10. INTEGRATIONS

Integration	Purpose
Cashfree	Payment processing
Razorpay	Payment processing
Email/SMS Provider	Transactional and event notifications
Push Notification Service	Mobile notifications
Maps/Location Service	Event location and discovery

Specific third-party providers for email, SMS, push and maps are **TBD** unless separately confirmed.

---

11. ADMINISTRATION & MODERATION

Super Admin shall be able to:

- Review and approve/reject events.
- Suspend or remove events.
- Review flagged hosts.
- Take action against policy violations.
- Manage platform-level controls.
- Take appropriate action for fraud, fake events, misuse and payment-related issues.

Hosts should receive a warning before suspension where appropriate. Immediate action may be taken for serious fraud or safety-related cases.

---

12. PRIVACY

- Users shall control their visibility where applicable.
- Exact real-time location shall not be exposed.
- Account deletion shall remove or anonymize personal data where applicable.
- Legally required financial and transaction records may be retained.

---

13. AUDIT & LOGGING

Business audit records should be maintained for important actions including:

- Event approval/rejection
- Event cancellation
- Host suspension/removal
- Payment and refund activities
- Payout processing
- Ticket check-ins
- Community moderation
- Permission changes

Technical logs should capture relevant application, API and integration errors.

---

14. ERROR & EDGE CASES

The system shall appropriately handle:

- Invalid or expired OTP
- Failed payments
- Payment success with delayed confirmation
- Network interruption
- Duplicate payment attempts
- Duplicate QR scans
- Offline scan synchronization conflicts
- Expired tickets
- Cancelled/rescheduled events

- Insufficient ticket inventory
- Unauthorized actions
- Deleted or suspended accounts
- Third-party service failures

User-facing errors should provide clear recovery guidance where possible.

---

15. RESPONSIVE & UI REQUIREMENTS

The application shall follow the approved Figma designs.

The UI shall support appropriate layouts for the target mobile devices.

Where responsive behavior is not defined in Figma, the implementation shall follow agreed design decisions before development.

---

16. MVP DEFINITION

Must Have

- Authentication and user accounts
- Event discovery
- Event creation and Super Admin approval
- Event lifecycle management
- Ticketing and checkout
- Cashfree and Razorpay integration
- Platform fee calculation
- GST calculation
- Host payouts
- Digital tickets
- QR validation
- Offline QR validation
- Communities
- Text-based group chat
- Community moderation
- Notifications
- Super Admin controls
- Privacy and account deletion

- Maps Integration
- Aadhar and PAN Verification
- Desktop Host Portal

Not Included in Current Version

- Pegwin Wallet
- Ticket transfers
- Direct messaging
- Member media sharing in community chat.

---

17. RECOMMENDED TECHNICAL CONSIDERATIONS

The following are recommendations and should be finalized during technical planning:

- Modular application architecture to support future scaling.
- Centralized authentication and role-based authorization.
- Transaction-safe ticket inventory and payment processing.
- Idempotent payment and QR check-in operations.
- Reliable offline synchronization for QR validation.
- Background processing for notifications and payout workflows.
- Secure storage of personal and transaction information.
- Monitoring and logging for critical payment, ticketing and synchronization processes.
- Architecture should allow future payment gateway routing strategies without major application changes.

---

18. PROJECT RISKS

Risk	Impact	Mitigation
Payment gateway failure	High	Support multiple gateways and appropriate failure handling.
Offline QR synchronization	High	Maintain server-side check-in validation and synchronization controls.

conflicts		
Incorrect event approval	High	Super Admin approval required before events go live.
Host abuse/fraud	High	Host monitoring, warnings, suspension and removal controls.
High transaction volume	High	Scalable architecture and transaction-safe processing.
Third-party service downtime	Medium	Retry and failure-handling mechanisms.

---

19. REQUIREMENT TRACEABILITY

Major requirements shall be traceable to:

Requirement → Module → User Role → Figma Screen → Acceptance Criteria

The Figma design shall remain the primary UI/UX reference, while this BRD defines the agreed business and functional behavior.

---

20. FINAL PROJECT SUMMARY

Product: Pegwin Circle

Platform: Mobile Application

Launch Market: India

Currency: INR (₹)

Core Modules:

1. Authentication & Accounts
2. Event Discovery
3. Event Management
4. Ticketing & Checkout
5. Payments & Payouts
6. QR Ticket Validation
7. Communities & Group Chat

8. Notifications
9. Moderation & Administration
10. Privacy & Account Management

Payment Gateways: Cashfree, Razorpay

Expected MVP Scale: Approximately 100,000 registered users, 10,000 monthly active users and 100,000 ticket transactions per month.

Primary Business Control: Super Admin approval and platform moderation.

Current Exclusions: Pegwin Wallet, ticket transfer, direct messaging, member media sharing in community chat.

---

21. DOCUMENT STATUS

This BRD represents the consolidated business and functional requirements based on the available project information, client clarifications, approved business decisions and Figma design.

Any requirement not explicitly defined in this document or the approved Figma design shall require confirmation before implementation.

Status: Final Requirements Baseline
